Fraize mow and top grade quote

- Fraize mow of entire field
- 200 tons of whitewashed top-dressing sand
- Solid tine of entire field
- Laser Top Grade of entire field
- Agronomic program consisting of 3 applications (foliar and granular) for reestablishment of playing field.

Fraize mowing is a great option to remove unwanted organic material and the thatch build-up layer, while leaving behind enough rhizomes and stolons to allow the fields to grow back in. Fraize mowing will also help eliminate any high spots on the field. Laser top grading is a great option to correct surface inconsistencies within a 2" threshold. Fields will also see the benefit of incorporating coarse sand into existing rootzone/native soil. Solid tine aerification will take place first to allow sand to be moved into the rootzone. Then the quoted amount of sand will be applied, and laser graded as described, once grade work is complete the field will need to remain closed for 6-8 weeks to allow proper establishment. This means all activities including mowing. Game Day will reestablish the playing surface. This process will give you an almost brand-new field.

-All labor, material, mobilization and overhead costs.
